

**From edition**

**Dear colleagues!**

We are happy to meet You on the electronic pages our journal!

In this issue we traditionally provide relevant materials in various areas of radiology. Original articles and case studies regarding critical problems of cardiology, Oncology, gastroenterology and others.

The rubric "master-class", so beloved by our readers, in this edition, is read by Professor A. V. Amosov, who is talking about the opportunities and perspectives in ultrasonic research in urology. And under the heading "Radiologist Notes" we continue to acquaint you with the work of our colleagues – Professor G. V. Ratobilskiy represents the fragment of his book. For understanding of teaching the specialty, we asked companies to talk about their work in this direction.

I hope this issue of the Russian Electronic Journal of Radiology will be interesting!

**Sincerely,**

**Executive editor Natalya SEROVA**
